"Comfortable, ISN'T IT?"

Comfort in a chair is more than skin deep. The things you don't see are most important.

First, springs are made in many grades—cheap ones, poorly tempered, are too hard or too soft, so that you perch on a hump or are buried in the cushion. A comfortable chair must have strong steel springs well tied together.

The padding must be of good material that doesn't get lumpy.

The cover must not be fussy or quickly soiled.

These things enter into the cost of that comfortable chair. They need not make it expensive.

Take time to come in now and find out a lot about chairs. You'll want one sure.

Among the abutting owners of property from 36 to 54 North Main street and the aldermanic street committee, there is a movement to replace the entire stretch of concrete walk with cement. In front of the Drown and Howland blocks, the abutters have already started to lay cement walks, thereby abolishing three hateways, and the street committee has consented to extend the work in front of each block to the curb. Now it is proposed to continue the cement walk from Miers' barber shop to the L. A. Averill building. If such a course is pursued, the walk in front of the Granite block will be lowered to a level with the curb, a move which will eliminate a pronounced hump in the sidewalk that has long been a menace to pedestrians. The chairman of the street committee and the abutters inspected the sidewalk in that vicinity this forenoon.
